OBJECTIVE

Backend Engineer with 3+ years of experience in fintech and banking domains, specializing in backend services, event-driven systems, and large-scale data processing. Strong background in Golang, NestJS, Kafka, Redis, and database design. Seeking to leverage my experience in building scalable and reliable distributed systems while contributing to business growth and technical excellence.

WORKING EXPERIENCES

Lotte C&F

Backend Software Engineer

HCMC, VN

May 2025 – Present

Project: CNF Job Management Platform

- **Description:** Built a backend system to automate financial data exchange between internal services and partner systems via scheduled jobs, SFTP file transfer, and Kafka events. The platform supports daily and monthly financial workflows, background processing, and multi-database synchronization.
- **Technology:** NestJS, TypeScript, BullMQ, Redis, Kafka, gRPC, MongoDB, PostgreSQL, MySQL, Prisma, Docker.
- **Responsibilities:**
 - * Developed and maintained cron-based job workflows for pull and push file processing.
 - * Implemented BullMQ queue workers with retry and backoff strategies for reliable background execution.
 - * Integrated SFTP, Kafka, and gRPC for secure data transfer and service-to-service communication.
 - * Built batch and stream processing logic for large CSV and Excel datasets.
 - * Implemented multi-database synchronization across MongoDB, PostgreSQL, and MySQL.
 - * Supported deployment and operations with Docker, structured logging, health checks, and production monitoring.

Orient Commercial Joint Stock Bank (OCB)

Senior Software Engineer

HCMC, VN

October 2023 – May 2025

Project: OCB iGen

- **Description:** Upgraded and enhanced OCB iGen, a digital credit card solution that enables customers to obtain a credit card within minutes through OCB OMNI. The system supports digital card issuance, card management, and integration with core banking and card processing platforms.
- **Technology:** Golang, ReactJS, Oracle Database, Way4, Kafka, REST APIs.
- **Responsibilities:**
 - * Analyze business requirements and translate them into technical solutions.
 - * Design and develop backend APIs for digital card issuance and card management features.
 - * Maintain production systems, troubleshoot incidents, and implement bug fixes.
 - * Design and optimize database structures to support new business requirements.
 - * Configure and customize Way4 card processing events to support business workflows.
 - * Collaborate with business analysts, QA engineers, and stakeholders throughout the development lifecycle.

Project: Apple Pay Napas

- **Description:** Developed card tokenization and transaction processing integrations to support Apple Pay and Napas card services, enabling secure digital payment capabilities for OCB customers.
- **Technology:** Golang, Oracle Database, Way4, REST APIs, Napas Integration.
- **Responsibilities:**
 - * Analyze integration requirements between OCB systems, Way4, and Napas.
 - * Develop APIs supporting transaction processing and card tokenization services.
 - * Configure Way4 card products and event flows for Napas card operations.

- * Design database enhancements to support new payment features.
- * Perform testing, deployment, and production support activities.

Project: Way4 Event Processing

- o **Description:** Built integration services that consume Kafka messages generated from Way4 events and synchronize data with internal banking systems and Liobank.
- o **Technology:** Golang, Kafka, Oracle Database, Way4.
- o **Responsibilities:**
 - * Develop Kafka consumers for processing card and transaction events.
 - * Implement integrations for email and SMS notification services.
 - * Synchronize transaction and customer data across multiple banking systems.
 - * Configure event mapping and validation rules for Way4-generated events.

Orient Commercial Joint Stock Bank (OCB)

Software Engineer

HCMC, VN

October 2022 – October 2023

Project: OCB OMNI 4.0

- o **Description:** Participated in the migration and enhancement of OCB's digital banking platform from OMNI 3.0 to OMNI 4.0, delivering improved card management capabilities and customer experiences.
- o **Technology:** Golang, ReactJS, Oracle Database, Way4, REST APIs.
- o **Responsibilities:**
 - * Develop and enhance backend APIs supporting card-related services.
 - * Implement card management functions including card information retrieval, card cancellation, and credit limit updates.
 - * Maintain and optimize existing systems in production environments.
 - * Analyze requirements and design database changes for new functionalities.
 - * Collaborate with QA and business teams to ensure solution quality.

Project: Liobank

- o **Description:** Contributed to the development of Liobank, a digital banking platform providing integrated debit and credit card services.
- o **Technology:** Golang, Oracle Database, Way4, REST APIs.
- o **Responsibilities:**
 - * Develop backend services supporting card operations and customer management.
 - * Build APIs for card information retrieval and card lifecycle management.
 - * Maintain production systems and support issue investigation.
 - * Participate in requirement analysis and technical design activities.

FPT University

Software Engineer (Graduation Project)

HCMC, VN

December 2021 – April 2022

Project: PODOC (Print On Demand)

- o **Description:** Developed a web-based print-on-demand platform that allows customers to customize clothing products online while helping sellers manage inventory efficiently.
- o **Technology:** ReactJS, MySQL, REST APIs.
- o **Responsibilities:**
 - * Gather requirements from manufacturers, sellers, and customers.
 - * Design database schemas and application architecture.
 - * Develop the application from scratch.
 - * Implement product customization and order management functionalities.

EDUCATION

FPT University

B.S. in Software Engineering

HCMC, VN

2018 – 2022

SKILLS

Backend: Golang, NestJS, REST APIs, Microservices, Event-driven architecture, Kafka, BullMQ, Redis.

Frontend: ReactJS, TypeScript, JavaScript.

Database Management System: Oracle Database, MySQL, PostgreSQL, MongoDB, Prisma.

DevOps: Docker, Docker Compose, Kubernetes, GitLab CI/CD.

Banking and Fintech: Way4 Platform, Card Management, Digital Banking, Payment Integration, SFTP Integration, Batch Processing.

Methodology and Process: Agile Scrum, Jira, Requirement Analysis, Production Support.

CERTIFICATES

- English communication for software engineering and banking domain.
